SUMMARY

Security Engineer with 5+ years engineering threat intelligence platforms, detection pipelines, and security automation, with cross-functional work alongside SOC and incident response teams. Currently leading CTI platform engineering at DISH Network, after driving SOC transition and transformation initiatives at Wipro.

FULL TIME WORK EXPERIENCE

DISH Network (EchoStar), Denver, CO | Security Engineer II

Aug 2024 - Present

- Led engineering buildout for the Threat Research program, deploying the organization's first centralized CTI platform (OpenCTI) at production scale in AWS and owning the platform architecture, roadmap, and workflow evolution.
- Built code-driven ingestion pipelines across 50+ OSINT, dark web and commercial CTI vendor sources, normalizing every feed to STIX 2.1 and monitoring feed health and IOC volume through dashboards and alerting.
- Designed a PIR-driven feed evaluation framework that scores each source on IOC overlap, industry relevance, decay and operational use, giving feed purchase and renewal decisions a measurable basis.
- Operationalized threat intelligence via Cortex XSIAM, automating distribution of 1,000+ IOCs/day to EDL blocklists and XDR prevention rules, and delivering Sigma/YARA detection content for threat hunting.
- Deploying OpenAEV to run framework-mapped attack simulations of threats prioritized in OpenCTI, performing detection gap analysis and feeding results back into intelligence to close the CTEM loop.
- Built Python (pycti, GraphQL) automations to extend OpenCTI beyond native capabilities, standardizing tagging/enrichment and enforcing data-quality controls, cutting manual effort by 90%.
- Built a threat intelligence assistant on Amazon Bedrock (RAG) that serves source-cited answers from the threat graph, now the intelligence layer for the team's risk prioritization and forecasting engines.
- Established AI threat intelligence as a new research area, modeling jailbreaks and prompt injection in OpenCTI as STIX 2.1 with NOVA rules, MITRE ATLAS and OWASP LLM Top 10 mappings.

Alliant National, Longmont, CO | AI Software Engineer Intern

May 2023 - Aug 2023

- Engineered a web-based backend service reducing title insurance generation process from days to under 5 minutes by orchestrating data retrieval, document summarization, and generating title commitment previews.

Wipro Limited, India | Senior Project Engineer

Jun 2019 - Jun 2022

- Owned the SIEM technical workstream within Schneider Electric's global SOC transition (\$13M TCV), mapping the full QRadar deployment to ensure operational continuity.
- Led the migration of a 120TB QRadar SIEM deployment from on-premises to AWS, automating concurrent data synchronization via custom bash scripting and achieving a 5X improvement in data transfer rate.
- Developed 50+ custom SIEM parsers and modeled detection use cases against ingested log sources in collaboration with cross-functional teams, reducing false positives by 25% and alert triage volume by 20%.
- Built Python automations leveraging QRadar APIs to monitor log source health and analyze correlation rule performance, eliminating recurring manual triage and flagging platform issues for SOC operations.

EDUCATION

University of Colorado Boulder

Master of Science in Computer Science - GPA: 3.97/4

Boulder, CO

Aug 2022 - May 2024

National Institute of Technology Trichy

B.Tech in Instrumentation and Control Engineering - CGPA: 7.9/10

Trichy, India

May 2015 - May 2019

TECHNICAL SKILLS

Threat Intelligence & Detection: OpenCTI, Intsigths, STIX/TAXII, Sigma, YARA, MITRE ATT&CK, D3FEND, ATLAS, OSINT

SIEM/SOAR & XDR: Cortex XSIAM, Palo Alto XDR, IBM QRadar, Splunk, Azure Sentinel, Elastic Stack, IBM Resilient SOAR

Cloud & Infrastructure: AWS (EC2, ALB, Bedrock, Redshift, S3), Microsoft Azure, GCP, Docker, Kubernetes

Languages & Automation: Python, GraphQL, Bash, SQL, REST APIs

AI/ML: Amazon Bedrock Knowledge Bases, Retrieval-Augmented Generation (RAG), Prompt Engineering

Certifications: AWS Certified Solutions Architect – Associate
